PROJECTS

StochSS : Cloud-based Stochastic Simulation as a Service – Research at RACE Lab	Fall 2014 – Spring 2015
<ul style="list-style-type: none">– Built a generic cloud computing framework for configuring virtual machines and auto-deploying arbitrary scientific simulation programs in the cloud by wrapping the source code as a web service.– Developed Flex Cloud, a lightweight cloud service abstraction layer for supporting simulation runs over different infrastructures (physical, virtual, as well as public or private clouds).	
RentMatch : AppFolio's Pricing Analytics – AppFolio	Summer 2014
<ul style="list-style-type: none">– Worked in AppFolio's Data Science team on finding <i>Rental Unit Similarity</i> using machine learning methods based on features like amenities, associated text, school districts, location, linked census data, etc.– Designed and built Super Squirrel, a <i>MapReduce</i> like framework for collecting and processing data, distributed across AppFolio's data centers.	
EEFF : Endpoint Encryption for Files and Folders – McAfee	Feb 2012 – Aug 2013
<ul style="list-style-type: none">– Worked on enterprise encryption product for Windows endpoints – contributed to client-side (including filter driver development) as well as server-side ePO management codebase.– Developed 'Kill Pill' Proof of Concept – remote deactivation and secure wiping of encrypted USB devices.– Other features developed include Key Cache Expiry, code overhaul for FIPS 140-2 encryption standard compliance, Role-Based Key Management, enhanced encrypted removable media recovery, etc.	
RamseyCoin : Cloud Infrastructure for BitCoin Mining	Spring 2014
<ul style="list-style-type: none">– Designed and built a fault-tolerant, scalable P2P service for computing proof-of-work function for mining a fictitious bitcoin over disparate computing infrastructures like Amazon AWS, Azure, Condor, for feasibility demonstration.	
eFUSE : Encrypted File System in User Space	Fall 2013
<ul style="list-style-type: none">– Built an encrypted file system in user space, based on the Unix File System using FUSE and OpenSSL libraries (AES encryption). Optimized read/writes by implementing LRU-based buffer and inode caching.	

Chimera : Distributed Bank Ledger

Fall 2014

- Designed and built a fault-tolerant, distributed, consistent store for a bank ledger where transactions can be recorded in replicated logs using a modified version of Paxos protocol to achieve consensus.

StockMood : Sentiment Analysis of StockTwits

Winter 2014

- Developed a prediction model for Stock Market trends from sentiment analysis of **StockTwits**, a Twitter-like microblogging platform for stock market news, employing supervised machine learning methods.

Trac.kr : A Scalable Web App for tracking goals

Fall 2013

- Developed a *Scalable Social Web Service* in *Rails*, that keeps track of goals that the user wants to achieve in areas like hobbies, socializing, family, health where your friends can offer suggestions, cheer you on or join a shared goal, etc.

Query Expansion Improvement in Terrier IR Platform – Indian Statistical Institute

Jul 2010 – Jun 2011

- Optimized Query Expansion in *Terrier Information Retrieval Platform* by exploiting semantic relationships amongst words using **WordNet** in conjunction with **Local Context Analysis** techniques.

DMS-OS : A 32-bit Operating System – B. Tech. Project

Aug 2010 – May 2011

- Built a rudimentary 32-bit operating system from scratch with multi-tasking support, modeled after the Linux Kernel. Coded kernel modules for device drivers for managing *Keyboard*, *Visual Displays*, *FAT12 File System*, etc.
